

Tech Brief Series

HSS Systems software suite of MH/MR/D&A Programs offer the Human Service Provider an integrated product line to manage the client from provider to County level administration seamlessly. The Base Module contains the all of the basic functionality required by either Human Service providers or County based administrative units.

Base Module

The key to the success of the program is the integrated Client Master File that provides the Client centered information that is needed to track services across programs. The Client's integrated history is available for comprehensive treatment planning and outcome studies. The whole range of liability options and managed care authorizations are tracked and can quickly be accessed by the staff. It is this Client centered approach that gives the software its unique ability to work as you work so that more time and energy can be devoted to Client services.

The HSS Systems MH/MR/D&A system runs on a SCO UNIX® operating system and is fully integrated into a Windows 95/98/2000/XP® or Windows NT® environment. The addition of the HSS Systems ODBC Driver enables the use of any 32 bit (Windows 95/98/2000/XP and Windows NT) ODBC compliant programs to work directly with the HSS Systems MH/MR/D&A databases for unlimited ease of reporting and planning.

All external reporting requirements can be accurately fulfilled.

The Base Module consists of programs designed to provide five core functions:	Additional modules are available to provide a comprehensive Information System solution
Client Registration	Claims Processing
Billing	Accounts Payable
Reconciliation	General Ledger
Service Entry	Payroll
Reporting (State and County)	Report Writer
	Clinical Application Modules
