Tech Brief Series

The HSS Systems Human Service
Software records a significant amount
of detailed information concerning the
interaction between provider and
client. In an effort to support the
provider in the field and to capture the
detailed information in the most
efficient manner possible, HSS
Systems laptop Windows based
application provides the flexibility and
ease of a windows point and click
application with the robust core
business logic of the HSS Systems
Human Service Software.

Windows Based Laptop Solutions

The application is designed to support the download of client information from the main system to the laptop, field entry of data concerning services provided the client and case notes, the uploading of detail to the main system when returning to the office and full integration with Microsoft Word for printing detailed encounter documents either singly or in batch.

Uploaded transactions are automatically verified and processed by the HSS Systems system and services are then ready to be posted and billed without any data re-entry. New information about clients can then be downloaded to the laptop and it is ready to go out in the field again.
